NMCI Group

Compliance and Integrity

QUALITY AND ZERO TOLERANCE POLICY STATEMENT

NMCI Group is totally committed to understanding and meeting the quality needs and expectations of all of our customers. The Quality and Zero Tolerance Program has the absolute support of National Marine Consultants, Inc.'s corporate management team. The Quality Assurance Manager is responsible for managing the Quality Program, and has full authority to take all the necessary actions to ensure its implementation.

As part of the Zero Tolerance Policy no Quality or Quantity determination will be published unless traceable to a documented measurement, or professional judgment within industry standards.

Any employee contravening this policy and or engaging in criminal activity will be subject to disciplinary action, including instant dismissal and will be reported to the appropriate authorities.

NMCI Inspectors strictly follow a "Zero Conflict of Interest" principle to ensure quality works.

At NMCI Group, quality is the responsibility of every employee. Meeting this commitment will result in the continued satisfaction of our customers and an improved quality of life for our employees. The provisions of the NMCI Quality Assurance Manual are binding on those individuals given the responsibilities outlined herein.

The entire NMCI team will adhere to the spirit and intent of this firm's Quality and Zero Tolerance Policy, as well as the directives of the Quality Assurance Manual and its supporting quality system documentation. We will continue to aggressively strive to ensure that customer satisfaction is achieved at all times, and in all things.

Supply Chain Security

Supply chain security refers to efforts to enhance the security of the supply chain, the transport and logistics system for the world's cargo. It combines traditional practices of supply chain management with the security requirements driven by threats such as terrorism, piracy, and theft.

Typical supply chain security activities include:

- Credentialing of participants in the supply chain
- Screening and validating of the contents of cargo being shipped
- Advance notification of the contents to the destination country
- Ensuring the security of cargo while in-transit via the use of locks and tamper-proof seals
- Inspecting cargo on entry

There are a number of supply chain security initiatives in the United States and abroad, including:

- The Customs Trade Partnership against Terrorism (C-TPAT), a voluntary compliance program for companies to improve the security of their corporate supply chains.
- The World Customs Organization (WCO) adopted the Framework of Standards to Secure and Facilitate Global Trade in 2005, which consists of supply chain security standards for Customs administrations including Authorized Economic Operator(AEO) programs.
- The Container Security Initiative(CSI), a program led by U.S. Customs and Border Protection in the Department of Homeland Security focused on screening containers at foreign ports.
- The Global Container Control Programme(CCP), a joint United Nations Office on Drugs and Crime (UNODC)/World Customs Organization (WCO) initiative working to establish effective container controls at select ports across the globe with the aim to prevent trafficking of drugs, chemicals and other contraband and to facilitate trade by strengthening cooperation between the customs, trade and enforcement communities.
- The Global Trade Exchange, a DHS data-mining program designed to collect financial information about shipments, with the objective of determining safety of cargo shipments are safe.
- Efforts for countries around the world to implement and enforce the International Ship and Port Facility Security Code (ISPS Code), an agreement of 148 countries that are members of the International Maritime Organization (IMO).
- Pilot initiatives by companies in the private sector to track and monitor the integrity of cargo containers moving around the world using technologies such as RFID and GPS.
- The International Organization for Standardization have released a series of Standards for the establishment and management of supply chain security. ISO/PAS 28000 *Specification for Security Management Systems for the Supply Chain*, offers public and private enterprise an international high-level management standard that enables organisations to utilise a globally consistent management approach to applying supply chain security initiatives.
